

What are the three main layers of software architecture? Write one line about each.

- **Presentation Layer** – The user interface where users interact with the application.
- **Business Logic Layer** – Processes data and implements the application's rules and functionality.
- **Data Layer** – Stores, retrieves, and manages data in the database.

Define client and server in your own words with one real-life example.

- **Client** – A device or application that requests data or services from a server.
- **Server** – A computer or system that provides data or services to clients.

Example: When you watch a video on YouTube, your phone or computer is the **client**, and YouTube's computer is the **server** that sends the video to you.

Write 2 differences each between desktop apps, web apps, and mobile apps.

Desktop Apps

- Installed on a computer.
- Can often work without an internet connection.

Web Apps

- Run in a web browser.
- Usually require an internet connection.

Mobile Apps

- Installed on smartphones or tablets.
- Can use device features like the camera, GPS, and fingerprint sensor.

Name any 3 databases and mention whether each is SQL or NoSQL.

- **MySQL** – SQL database.
- **PostgreSQL** – SQL database.
- **MongoDB** – NoSQL database.
